

Invisible connector for 12 mm groove

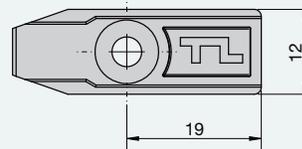

The invisible refinement for each shelf and each furniture carcass from material thickness 26 mm onwards. Assembly connections of bottom, frame, covers and side panels work like being glued with the new invisible furniture connectors. Shellproof connections without any visible assembly items – and nevertheless easy to dismantle. Simply ingenious.

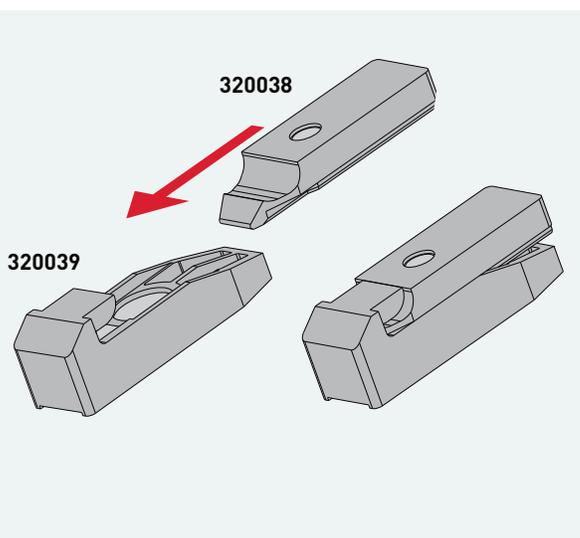

All articles are patented.

Invisible connector for 12 mm groove

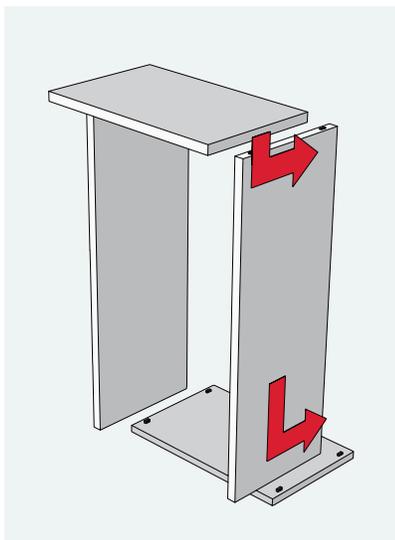

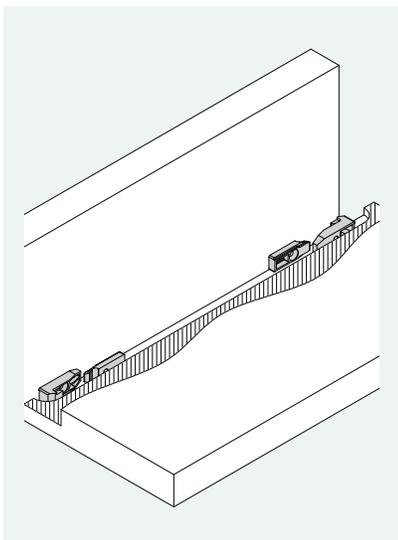

Shelf construction/rack

Bottom, cover and shelves are strainlessly inserted between the side panels.

Shelf construction/free standing shelf

Bottom and cover are assembled as done for the carcass construction. The shelves are divided and inserted from both sides for an all around closed optic.

Carcass construction

Bottom and cover are attached to the side panels from above and caught through horizontal movement. The counter-sunk groove in the side panel is closed on both sides; after the assembly an all around closed optic is guaranteed.
